

## Statement about Ampoule Treatments

(Calw, October 2017) Ampoules are among the safest packaging materials for both pharmaceutical and cosmetic products. Since our ampoules are filled under clean room conditions, this eliminates the need for conventional preservation. Nevertheless, they have a very long shelf life.

Ampoules are easy to use and offer optimum hygiene conditions due to their individual portioning.

The ampoule should be shaken briefly before opening. Gently tapping the top of the ampoule sends the contents down again.

To ensure a smooth, clean break at the predetermined breaking point, the plastic ampoule opener included with the product must be used. In the process, the ampoule opener must enclose the ampoule cylinder evenly so the break at the neck when the ampoule is opened is clean.

Now the content of the ampoule can be gradually poured into your hand. While doing this it is necessary to avoid injury by making sure that skin does not come into contact with the broken neck of the ampoule.
