

## Statement in response to the topic „Formation of Particles in Sunscreen Lotion“

(Calw, June 2016) Using advanced technology and valuable plant extracts, Börlind GmbH has developed a line of sun care products that comply with the current requirements and guidelines.

The sunscreen lotions of the brands ANNEMARIE BÖRLIND – Natural Beauty and DADO SENS Dermacosmetics contain natural waxes such as beeswax or Jojoba oil, which give the product its consistency and which serve as a skincare component and protect the skin from drying out.

If the sunscreen lotions are subject to extreme temperature fluctuations – for example during transport - the molecules of the waxes may crystallize. However, these small, hardened particles will dissolve during the application, by massaging them into the skin and through body heat. This does not impact the quality of the product and the respective sunscreen filter.
